

Nowadays, getting information from the data and showing the data have become an indispensable skill for various jobs. However programming or design is not an easy ability for normal people. So we want to design a software making it possible that let more excellent work be used by normal people.

VISUALIZE DATA

Designer will design different types of diagram with different color schemes. And they will provide the advices for which data is suite for this type in a specific format so program can analysis it.

Basic

Program will choose type and color scheme for users based on the data and the advices from designers.

Development

According to the data feeded back by customer to match type and color scheme in a more intelligent way.

I hope the users will never use this function

GET DATA

Where
